## LED drivers - General instructions

High inrush currents can seriously damage electrical components such as circuit breakers, fuses, switches, drivers,
When connecting luminaires to the grid, the amount of LED drivers connected to one circuit breaker is limited.
See table below:
Maximum \# LED drivers per circuit breaker MCB 16A type B

| LED linear (Fortimo LEDline) |  |
| :--- | :--- |
| non-dimmable | max. 24 drivers |
| dimmable 1-10V | max. 18 drivers |
| dimmable PUSH DIM and DALI | max. 24 drivers |

| LED linear 24V flexible LEDstrip |  |
| :--- | :--- |
| $0-60 \mathrm{~W}$ | max. 15 drivers |
| $61-120 \mathrm{~W}$ | max. 11 drivers |
| $121-150 \mathrm{~W}$ | max. 3 drivers |

| LED spotlight |  |
| :--- | :--- |
| non-dimmable | max. 27 drivers |
| dimmable $1-10 \mathrm{~V}$ and DALI | max. 15 drivers |
| dimmable PUSH DIM | max. 8 drivers |

| Other types of MCB | relative number <br> of ballasts |
| :--- | :--- |
| type B 25A | $156 \%$ |
| type B 20A | $125 \%$ |
| type B 16A | $\mathbf{1 0 0 \%}$ |
| type B 10A | $63 \%$ |
| type C 25A | $260 \%$ |
| type C 20A | $208 \%$ |
| type C 16A | $170 \%$ |
| type C 10A | $104 \%$ |

Dimming diagrams for LED linear (Fortimo LEDline and 24V flexible LEDstrip)

1-10V dimmer installation: all positive (+) and negative (-) ports must be connected to each othe DALI: dali wiring may not be longer than 300m total per DALI unit Push Dim: When connecting several appliances to 1 push button, wire the L (live) and $N$ (neutral) in logical sequence and don't mix them up

Always ensure a class 1 appliance is well earthed Ensure the capacity of the switch is appropriate to the number of appliances Don't exceed $50^{\circ} \mathrm{C}$ as ambient temperature
